Skills

AI / ML: LangGraph, LangSmith, FastMCP, Microsoft Foundry, Databricks, MLflow, RAG, MCP, LiteLLM
Languages: Python, Java (J2EE), C#, Kotlin, SQL (Oracle, PostgreSQL, MySQL), Bash, PowerShell
Tools: Git, GitHub Actions, Jira, Maven, Gradle, Postman, Confluence, OpenCode, Codex
Infrastructure: AWS (RDS), Azure (AD, Exchange, DB, DevOps, Foundry, Container Apps)

Experience

Senior Software Developer, Jim Pattison Food Group – Langley, BC — Sep 2026 – Present

- Architect enterprise AI systems on LangGraph, FastMCP, Microsoft Foundry, Databricks, and MLflow, taking initiatives from proof of concept to production deployment in partnership with Architecture, Cloud, and Security teams.
- Build custom MCP servers, agent workflows, retrieval pipelines, and integrations that allow AI agents to securely interact with enterprise tools and internal data.
- Evaluate emerging AI platforms and frameworks to determine appropriate approaches for enterprise agent development, observability, model access, governance, and orchestration.
- Establish enterprise AI governance patterns for secure tool access, system integration, and deployment, establishing the reference approach for 3+ AI initiatives.
- Lead the design and development of enterprise agentic AI solutions that automate internal support workflows and integrate LLM agents with business systems and services.
- Implement LLM evaluation and tracing (LangSmith, MLflow) to regression test agent changes before release.

Software Developer 2, Jim Pattison Food Group – Langley, BC — Dec 2023 – Sep 2026

- Led modernization of internal supply-chain systems across C#, J2EE, Oracle PL/SQL, and integration platforms.
- Implemented GitHub Actions CI/CD pipelines across 10+ repositories, cutting deployment steps by ~50% and release time by ~60% while standardizing release workflows.
- Built and maintained complex Oracle PL/SQL packages and schemas, owning a core database used by 30+ developers across high-impact internal systems.

Software Developer 1, Jim Pattison Food Group – Langley, BC — May 2022 – Dec 2023

- Upgraded security libraries in legacy C# applications, migrating authentication flows from a direct LDAP implementation to Active Directory, simplifying support complexity and improving maintainability.
- Served in on-call rotation supporting critical platforms handling over $1M in product nightly across 500+ locations, triaging incidents and restoring service to minimize business impact.

Projects

Enterprise Agentic AI Help Desk — Jim Pattison Food Group

- Designed and developed an agentic AI help desk automation system using LangGraph, FastMCP, Databricks, & MLflow.
- Served as the sole developer, owning the entire project from initial POC through implementation and integration.
- Built agent workflows leveraging RAG, custom MCP servers, and internal tools to automate high value support tasks.
- Partnered with architecture and security teams to establish deployment architecture and governance.
- Eliminated ~7 months of annual help desk labour on routine, high-volume tickets.

PyFuncAI — github.com/AaronCreor/PyFuncAI

- Developed an open-source Python library enabling LLMs to dynamically generate and execute Python functions from natural language.
- Designed a runtime compilation pipeline that safely injects generated functions into the Python environment using AST validation and restricted execution scope.
- Published to PyPI and built documentation for developers integrating dynamic tool generation into agent systems.

Education

University of Texas at Austin – MS in Computer Science — 2026
University of the Fraser Valley – BS in Computer Information Systems — 2022
